3. Table of confirmed priority locations	6

1. Introduction

National Highways is committed to minimising the impact of the Strategic Road Network on the water environment. We know that road runoff can carry pollutants which, under certain conditions, can have a negative environmental impact.

It is a complex challenge due to our extensive network, which includes around 15,000 outfalls (pipes or channels that discharge surface water directly into a watercourse) and 6,600 soakaways (filtration systems that allow water to percolate slowly into the ground) that discharge runoff into surrounding environments.

While some discharges have minimal impact, others pose high risks depending on factors such as volume of traffic, the impermeable area of the road surface and the sensitivity of the receiving water environment.

We are committed to addressing the highest-risk drainage assets on the strategic road network by the end of the 2030/31 financial year.

Our Water Quality Plan, published in 2023, identified 1,236 outfalls and soakaways as potentially high risk and set out proposals for assessing them and, where required, addressing them.

In October 2025, we published details of 182 locations identified through the validation and verification work set out in our Water Quality Plan. At that time, we explained that we expected approximately 250 outfalls and soakaways would ultimately require new or upgraded treatment systems by 2030.

This updated list reflects the progress made since then, including the identification of additional locations through ongoing assessment work and the completion of mitigation measures at a number of sites already included within the programme. Some locations previously included have been reprioritised, while additional locations have been identified where intervention is expected to deliver greater environmental benefit. It represents our latest view of the locations where action will deliver the most benefit, enabling us to focus our efforts on locations where we can deliver the greatest benefit for rivers, groundwater bodies and the wider water environment.

Our work is supported by the Government's third Road Investment Strategy (RIS3), which includes a commitment for National Highways to mitigate between 190 and 250 high-risk outfalls and soakaways and establishes water quality as a specific area of performance monitoring.

We will continue to share information on progress as we deliver on our commitment to improve water quality around our road network.

1.1. Understanding the information in this table

We have made our best efforts to ensure the accuracy of the information in this table and to present it in a straightforward way. As well as the table in this document, it is available as a CSV file.

In addition to this list of confirmed priority locations, we have published a separate CSV file showing locations removed from the programme since the 2025 publication together with the reason for change.

Here is an explanation of each of the column headings

Column title	Description
Asset Reference Number	A unique reference for the asset in National Highways' asset management system
Location	An Ordnance Survey grid coordinates showing the location of each asset
Scheme Name	The name of the project through which one or more high priority outfalls or soakaways in a local area will be addressed
Asset type	Whether the asset is an outfall (a pipe or channel that discharges surface water directly into a watercourse) or a soakaway (a filtration system that allows water to percolate into the ground).
Road Name	The motorway or major A road that the asset is on
Receiving Waterbody	The name of the Waterbody the asset discharges into (for outfalls), or alternatively the Groundwater Body , as defined by the EU Water Framework Directive (WFD)
Delivery status	The current stage of work at the site, complete or ongoing .
Catchment Based Approach (CaBA) Partnership	The local catchment partnership covering the area where the asset is located.
WQP mitigation	The planned delivery tranche under the Water Quality Plan, indicating when mitigation measures are expected to be delivered. Tranche 0 - Planned for 2026/28 delivery Tranche 1 & 2 - Planned for 2027/29 delivery Tranche 3 & 4 & 5 – Planned for 2028/31 delivery
